BOARD OF INTERMEDIATE AND SECONDARY EDUCATION, SAHIWAL

INTERMEDIATE (11TH CLASS) EXAMINATION, 2023

BIOLOGY

Past Paper 2023 • Paper Code: 6463

Retyped faithfully from the original board paper — same questions, no changes.

GROUP – I

Biology - Paper: I - Objective (ii)

Time Allowed: 20 Minutes | **Maximum Marks:** 17 | **Paper Code:** 6463

Note: Note: - You have four choices for each objective type question as A, B, C and D. The choice which you think is correct; fill that circle in front of that question number in your answer book. Use marker or pen to fill the circles. Cutting or filling up two or more circles will result no mark.

Note: SECTION-A

Q1. The male gametophyte has two wings in:

(A) Cycas
(B) Taxus
(C) Picea
(D) Pinus

Q2. The symptom of candidosis is:

(A) Convulsion
(B) Psychotic thrush
(C) Oral thrush
(D) Renal thrush

Q3. Mumps and measles are caused by:

(A) RNA naked virus
(B) DNA naked virus
(C) RNA enveloped virus
(D) DNA enveloped virus

Q4. The hollow, non-helical, filamentous appendages in bacteria:

(A) Cilia
(B) Pilli
(C) Flagella
(D) Cyst

Q5. Which of the given pigment is absent in algae?

(A) Phycocyanin
(B) Carotenoids
(C) Xanthophylls
(D) Phycoerythrin

Q6. The liver and muscle cells appear filled with glycogen within membrane bounded organelles in disease:

(A) Glycogenosis type -I
(B) Glycogenosis type -II
(C) Glycogenosis type -III
(D) Glycogenosis type -IV

Q7. The charge bearing site of an enzyme is called:

(A) Catalytic site
(B) Binding site
(C) Blocking site
(D) Active site

Q8. The number of carbon atom in waxes are:

(A) C_5-C_{15}
(B) C_{15}-C_{25}
(C) C_{25}-C_{35}
(D) C_{35}-C_{45}

Q9. The oldest period of Mesozoic era is:

(A) Jurassic
(B) Cretaceous
(C) Triassic
(D) Silurian

Q10. The renal vein brings deoxygenated blood from:

(A) Brain
(B) Liver
(C) Lungs
(D) Kidneys

Q11. The hydrostatic pressure in xylem and root, pressure of roots is responsible for:

(A) Bleeding
(B) Guttation
(C) Imbibition
(D) Transpiration

Q12. A contagious disease is:

(A) Cancer
(B) Asthma
(C) Tuberculosis
(D) Emphysema

Q13. The example of an insectivorous plant is:

(A) Dodder
(B) Dionaea
(C) Puccinea
(D) Neotia

Q14. In yeast Pyruvic acid is converted into:

(A) Ethyl alcohol
(B) Methyl alcohol
(C) Acetic acid
(D) Lactic acid

Q15. The absorption spectrum of light for chlorophyll ranges:

(A) 430-660 nm
(B) 430-670 nm
(C) 430-680 nm
(D) 430-690 nm

Q16. The worm that damages the wood of ships is called:

(A) Hook worm
(B) Sepia
(C) Teredo
(D) Mytilus

Q17. The respiratory pigment of molluscus is called:

(A) Haemocyanin
(B) Haemoglobin
(C) Haemolymph
(D) Colourless pigment

Biology - Paper: I - Subjective

Time Allowed: 2:40 Hours | **Maximum Marks:** 68

Note: Note:- Section B is compulsory. Attempt any 3 questions from Section C.

Note: SECTION-B

Q2.. (Marks 16) Write short answers to any Eight parts. (8 x 2 = 16)

i. Differentiate between anabolic and catabolic reaction.

ii. Only small quantities of vitamins are needed. Why?

iii. Enlist different regions of active site and write down their functions.

iv. Define inhibitors and give their examples.

v. Differentiate between karyogamy and plasmogamy.

vi. What is ergotism?

vii. Write down two affinities of echinoderms with hemichordates.

viii. What is marsupium?

ix. Give two parasitic adaptations of Platyhelminthes.

x. What is agricultural importance of earth worm?

xi. Why non cyclic phosphorylation changes into cyclic phosphorylation under certain conditions.

xii. Define oxidative phosphorylation.

Q3.. (Marks 16) Write short answers to any Eight parts. (8 x 2 = 16)

i. How can we determine the age of rocks?

ii. Differentiate between organ and organelle.

iii. What do you know about middle lamella?

iv. Differentiate between cristae and cisternae?

v. Why is it difficult to classify the protists?

vi. Discuss the importance of chlorella.

vii. What do you know about ramenta? Also write down their function.

viii. Differentiate between homospory and heterospory.

ix. What do you know about blue babies?

x. Differentiate between cavum venosum and cavum pulmonale.

xi. What are red tides?

xii. How the oomycotes are different from fungi?

Q4.. (Marks 12) Write short answers to any Six parts. (6 x 2 = 12)

i. What is Herpes simplex?

ii. Differentiate between heterotrophic and saprophyte bacteria.

iii. What is symbiotic nutrition?

iv. Define microphagous feeders. Give example.

v. What is the role of Gastrin?

vi. Differentiate between pulmonary and cutaneous respiration.

vii. What are parabronchi?

viii. What is rubisco? Write its function.

ix. Differentiate between bronchi and bronchioles.

> Note: SECTION-C (Note:- Attempt any Three questions. Each question carries eight marks (4+4=8))

Q5.. (Marks 8) (a) What is cloning? Give its applications.

(b) Give comparison between closed and open circulatory system.

Q6.. (Marks 8) (a) Discuss the taxonomic position of Fungi.

(b) Write the importance of carbon. Why carbon is called skeleton of life?

Q7.. (Marks 8) (a) Explain chemical composition of bacterial wall in detail.

(b) Write a comprehensive note on life cycle of Adiantum.

Q8.. (Marks 8) (a) What do you know about the structure of viruses?

(b) Sketch the Calvin Cycle.

Q9.. (Marks 8) (a) Write down composition and functions of Ribosomes.

(b) Describe digestion of food in human stomach.

GROUP – II

Biology - Paper: I - Objective (iv)

Time Allowed: 20 Minutes | **Maximum Marks:** 17 | **Paper Code:** 6467

Note: Note: - You have four choices for each objective type question as A, B, C and D. The choice which you think is correct; fill that circle in front of that question number in your answer book. Use marker or pen to fill the circles. Cutting or filling up two or more circles will result no mark.

Note: SECTION-A

Q1. A contagious disease is:

(A) Cancer
(B) Asthma
(C) Tuberculosis
(D) Emphysema

Q2. The example of an insectivorous plant is:

(A) Dodder
(B) Dionaea
(C) Puccinea
(D) Neotia

Q3. In yeast Pyruvic acid is converted into:

(A) Ethyl alcohol
(B) Methyl alcohol
(C) Acetic acid
(D) Lactic acid

Q4. The absorption spectrum of light for chlorophyll ranges:

(A) 430-660 nm
(B) 430-670 nm
(C) 430-680 nm
(D) 430-690 nm

Q5. The worm that damages the wood of ships is called:

(A) Hook worm
(B) Sepia
(C) Teredo
(D) Mytilus

Q6. The respiratory pigment of molluscus is called:

(A) Haemocyanin
(B) Haemoglobin
(C) Haemolymph
(D) Colourless pigment

Q7. The symptom of candidosis is:

(A) Convulsion
(B) Psychotic thrush
(C) Oral thrush
(D) Renal thrush

Q8. The male gametophyte has two wings in:

(A) Cycas
(B) Taxus
(C) Picea
(D) Pinus

Q9. Which of the given pigment is absent in algae?

(A) Phycocyanin
(B) Carotenoids
(C) Xanthophylls
(D) Phycoerythrin

Q10. The hollow, non-helical, filamentous appendages in bacteria:

(A) Cilia
(B) Pilli
(C) Flagella
(D) Cyst

Q11. Mumps and measles are caused by:

(A) RNA naked virus
(B) DNA naked virus
(C) RNA enveloped virus
(D) DNA enveloped virus

Q12. The liver and muscle cells appear filled with glycogen within membrane bounded organelles in disease:

(A) Glycogenosis type -I
(B) Glycogenosis type -II
(C) Glycogenosis type -III
(D) Glycogenosis type -IV

Q13. The charge bearing site of an enzyme is called:

(A) Catalytic site
(B) Binding site
(C) Blocking site
(D) Active site

Q14. The number of carbon atom in waxes are:

(A) C_5-C_{15}
(B) C_{15}-C_{25}
(C) C_{25}-C_{35}
(D) C_{35}-C_{45}

Q15. The oldest period of Mesozoic era is:

(A) Jurassic
(B) Cretaceous
(C) Triassic
(D) Silurian

Q16. The hydrostatic pressure in xylem and root, pressure of roots is responsible for:

(A) Bleeding
(B) Guttation
(C) Imbibition
(D) Transpiration

Q17. The renal vein brings deoxygenated blood from:

(A) Brain
(B) Liver
(C) Lungs
(D) Kidneys

Biology - Paper: I - Subjective

Time Allowed: 2:40 Hours | **Maximum Marks:** 68

Note: Note:- Section B is compulsory. Attempt any 3 questions from Section C.

Note: SECTION-B

Q2.. (Marks 16) Write short answers to any Eight parts. (8 x 2 = 16)

i. Differentiate between anabolic and catabolic reaction.

ii. Only small quantities of vitamins are needed. Why?

iii. Enlist different regions of active site and write down their functions.

iv. Define inhibitors and give their examples.

v. Differentiate between karyogamy and plasmogamy.

vi. What is ergotism?

vii. Write down two affinities of echinoderms with hemichordates.
